

CodeX (CDX) SMART CONTRACT & RESERVE CONTROL REVIEW REPORT

Revised Evidence Reconciliation Edition

Report ID: CDX-REV-MN-2026-09-R3.2
Issued: 12 September 2026

Prepared for Coded House LLC / CodeX
Pakistan business presence: Coded House - FBR Reg. 3740577028434

Classification: Management technical/compliance evidence review. This document is not presented as an independent audit opinion, bank confirmation, custodian attestation, statutory financial audit, or regulatory certification.

Revision purpose: This revision corrects contradictory state values in the earlier report by separating the 02 August 2026 historical read-back from the later 15 August 2026 production reserve snapshot. It also removes unverified external auditor and bank/custodian attribution.

1. Executive Summary and Review Conclusion

Purpose. This report reviews the CodeX (CDX) Ethereum Mainnet smart-contract deployment, reserve-control architecture, governance, signing controls, Chainlink publication flow, Hyperledger Fabric evidence, and point-in-time reserve state.

Key correction. The previous report mixed multiple dates and categories. In particular, EUR 913,000,000 was used as if it were current token supply in some places, while other sections correctly stated that the 02 August 2026 token supply was zero. This revision treats EUR 913,000,000 as the reported reserve amount / capacity figure, not as the current token supply.

State / measure	Correct treatment
Historical cut-off - 02 Aug 2026	totalSupply = 0 CDX; reserveStatus = false; reserveVersion = 0; availableReserve = 0
Later reserve snapshot - 15 Aug 2026	Reported reserve EUR 913,000,000; reserved EUR 228,250,000; available EUR 684,750,000
15 August minted supply	228,250,000 CDX
Later reported reserve coverage	400.00%
15 August reserve-version alignment	ReserveOracle v4; ReserveManager v4; CodeXToken fundReserveVersion v4 (operator-provided re-check)

Review conclusion: The supplied evidence supports a controlled reserve-linked issuance architecture and a later production reserve snapshot. This report does not independently verify an external bank balance, an external custodian, or an independent auditor opinion.

2. Report Basis, Scope and Claim Boundaries

2.1 Basis of preparation

- The report is based on supplied deployment records, on-chain read-back outputs, reserve workflow evidence, Hyperledger Fabric records, Chainlink relay evidence, Safe multisig execution evidence, and signed EIP-712 technical records.
- The historical 02 August 2026 state and the later 15 August 2026 state are presented separately. They must not be merged into a single 'current' value.
- The reserve source is described as an Authenticated Bank API workflow. The internal application/service name 'm1-corebanking' is not represented as a bank's internal core-banking platform.
- SoftHSM2 / PKCS#11 is described as a software signing module used for EIP-712 signing. This report does not represent it as a certified physical hardware HSM.
- Technical fields named attestationHash and auditHash are treated as cryptographic evidence fields. Their names do not, by themselves, prove an external auditor attestation or external bank confirmation.

2.2 Out of scope

- Independent confirmation of bank balances or bank/custodian solvency.
- Statutory financial-statement audit, ISAE 3000 assurance, or regulatory certification.
- Legal classification of CDX in any jurisdiction.
- Any claim that a named bank, custodian, or external audit firm has reviewed or guaranteed CodeX, unless separately proven by an authentic signed document.

External auditor / bank attribution: Names and license details appearing in the earlier report are not repeated here because their authenticity was not established in the evidence reviewed for this revision. If an external auditor or compliance report provider issues a genuine signed report, it should be published as a separate document with verifiable firm and signer details.

3. System Architecture and Trust Boundaries

Layer	Role in the reviewed workflow
Authenticated Bank API workflow	Provides the reserve-source data used by the reserve workflow. Credentials remain confidential.
Hyperledger Fabric	Private permissioned ledger; channel m1-channel, chaincode m1cc, committed sequence 6.
Go relay	Validates approved workflow data, triggers the reserve publication process, and submits controlled public-chain transactions.
SoftHSM2 / PKCS#11 signing module	Signs EIP-712 reserve and mint authorization payloads using the authorized signer key.
Chainlink relay components	Relay the approved reserve payload into the on-chain adapter/oracle publication flow.
Ethereum smart contracts	Enforce token state, permissions, reserve linkage, role checks, supply controls, and upgrade governance.
Safe multisig governance	3-of-5 administrative governance for role grants, upgrades, and fund registration.

3.1 Mainnet components

Component	Address
CodeXToken	0x27DdDb492c9e593472D28722ED762c04f3d7221f
ReserveOracle	0x2C2f3583a68b0Ca1eD5D0d3cbDFBabF9D9430Bb2
ReserveManager	0x5e8b1509EB058d0aA107707Ca3540284EAC5A8aD
FundRegistry	0x020A65d5439ac8f1541fcebE16006Ee2ee65e060
SignerRegistry	0xD7375247217cC82909c1bEF3E848bd07771C9E16
ChainlinkReserveAdapter	0xd1312BB0677137dc0410E79D003D9c6426D481ad
ChainlinkRequestManager	0x84501e118066B38Df0b90C43C1e67bb897cBbdBE
Safe governance	0xA86FC207De7EDb198a53C7cca179d75Bbeff5C28
Authorized EIP-712 signer	0x0CD6265c14049dda2E2a46CC847045c1EB9b9F5F

4. Historical Read-Back at 02 August 2026

The earlier report's most internally coherent 02 August statements show a pre-mint state. Those values are retained below as historical facts for that cut-off and are not described as the later production state.

Field	02 August 2026 cut-off
Network	Ethereum Mainnet - Chain ID 1
CodeX token	0x27DdDb492c9e593472D28722ED762c04f3d7221f
totalSupply	0 CDX
ReserveOracle reserveStatus	false
ReserveOracle reserveVersion	0
ReserveOracle availableReserve	0
Operational interpretation	Pre-production reserve-snapshot / pre-mint state

Important: The value EUR 913,000,000 must not appear in this historical table as totalSupply. In the corrected report it is treated as a reserve amount/capacity figure referenced by later reserve evidence, not as the 02 August token supply.

4.1 Why the prior report was inconsistent

- The prior executive summary and evidence register stated totalSupply = 0 CDX.
- Other prior tables incorrectly displayed 913,000,000 as 'Total supply' or 'Current CDX Supply'.
- The prior report also mixed reserveVersion 0, 1 and later operational values without separating their timestamps.
- This revision resolves the issue by preserving the historical cut-off and adding the later production snapshot as a separate subsequent event.

5. Subsequent Production Reserve State - 15 August 2026

Reserve-source evidence time: 15 August 2026 at 21:24:49 UTC. ReserveOracle publication time: 15 August 2026 at 21:56:47 UTC.

Measure	Later production evidence
Reported reserve	EUR 913,000,000
Reported reserved amount	EUR 228,250,000
Reported available reserve	EUR 684,750,000
Minted supply at 15 August snapshot	228,250,000 CDX
Reported reserve coverage	400.00%
ReserveOracle version	4
ReserveManager fundReserveVersion	4
CodeXToken fundReserveVersion	4 (operator-provided current re-check)
Reserve workflow status	VERIFIED / RESERVED (source workflow values)

5.1 Reserve evidence identifiers

Field	Value
Fund ID	GBP6JX0L73Q4WA6838
Reserve hash	0x48d8abad0f1326b6c1c737a06043327c98fb8eb67cb718987356c7b2fd5e9665
attestationHash	0x9618c9d679ae42a53f0d75dc1d0e2110cd5c5003da544815e59c939abc81e8c7
auditHash	0x2470187b83b2aa3e19f890d0d7c7706f605c54622e1aacbf76aa98350a2ffd02

Interpretation: VERIFIED and RESERVED are source-workflow status values. They are not described here as an independent auditor verification or external bank certification.

6. Publication, Governance and Ledger Evidence

6.1 Hyperledger Fabric

Field	Value
Channel	m1-channel
Chaincode	m1cc
Committed sequence	6
Transaction	7edc785a1461edd8ff54c8e5d513bb49c404b5523e36399c59c28a8de0779b26
Block	151

6.2 Chainlink relay

Field	Value
Ethereum transaction	0x2424b8f8e6cd1f5b95733adad6b7d1bea8e7a3f22262964e70f26427c6e8413f
Block	25,763,168
Result	Completed / successful relay evidence

6.3 Safe multisig execution

Field	Value
Safe	0xA86FC207De7EDb198a53C7cca179d75Bbeff5C28
Threshold	3 of 5 owners
Ethereum execution transaction	0x0e68cbe96c351a9b3d403b240b2bade4a5848471551028ac9dd74d45395e24e8
Block	25,763,274
Receipt status	SUCCESS

6.4 EIP-712 signing evidence

Field	Value
Domain name	CodeXReserveOracle
Domain version	1
Chain ID	1
Verifying contract	0x2C2f3583a68b0Ca1eD5D0d3cbDFBabF9D9430Bb2
Authorized signer	0x0CD6265c14049dda2E2a46CC847045c1EB9b9F5F
Digest	0xabe6b90b12aba77fdee0f7699320136d98028439247ca54c69aed54173e07557

7. Corrected Terminology and Evidence Treatment

Earlier wording / implication	Corrected wording / treatment
Core Banking / Core Banking Ledger	Authenticated Bank API workflow. 'm1-corebanking' may appear only as an internal application/service reference.
HSM as hardware appliance	SoftHSM2 / PKCS#11 software signing module used for EIP-712 signing.
Custodian: HSBC Bank	Removed. No named bank/custodian attribution is made without separately authenticated evidence.
attestationHash = signed auditor/bank attestation	Cryptographic technical evidence hash field; external attestation is not inferred from the field name.
auditHash = external audit report	Cryptographic technical evidence hash field; independent audit is not inferred from the field name.
Independent auditors / license details	Removed unless a genuine, separately verifiable signed engagement/report is supplied.
Prior current-supply label = 913,000,000 CDX	Incorrect as a current-supply label in this evidence set. Historical 02 Aug supply = 0; the 15 Aug supplied snapshot = 228,250,000 CDX. Any later current supply must be read on-chain and timestamped separately.
Reserve version = 0 / 1 / 4 mixed together	Timestamped separation: 02 Aug historical version 0; 15 Aug later production version 4.
Available reserve = 1	Not used as a reserve amount. Later supplied production value = EUR 684,750,000.

Website alignment: Website, whitepaper, transparency page, and this report should use the same claim boundaries: management/internal technical review unless an authentic external assurance report is separately issued.

8. Limitations, Risk and Publication Rules

- This report does not establish the existence, ownership, segregation, or legal availability of funds at any named bank.
- This report does not constitute an audit opinion, assurance opinion, statutory audit, bank confirmation, SWIFT confirmation, or custodian attestation.
- The later CodeXToken fundReserveVersion = 4 value is an operator-provided re-check. A reviewer seeking maximum reproducibility should obtain a same-block read transcript or explorer read evidence.
- Reserve figures are point-in-time technical source values and may change after the stated snapshot.
- The report does not assert a September 2026 'current totalSupply'. Any later supply shown by the website or Etherscan must be read directly from the token contract and displayed with its own retrieval timestamp; it must not be substituted into the 15 August snapshot.
- The 400% figure is the reported technical coverage ratio from the supplied reserve state; it should not be described as an independently audited coverage ratio.
- Any future external auditor/compliance provider report should be separately titled, independently signed, and linked with verifiable firm identity and engagement details.
- Do not publish API keys, RPC credentials, private keys, PKCS#11 PINs, raw approval codes, private investor data, or internal secrets.

8.1 Publication status

Approved description: Revised technical and reserve-control review prepared from supplied production evidence. Not an independent audit or bank/custodian attestation.

8.2 Management sign-off

Corporate-history note: Coded House in Pakistan is the earlier business presence. Supplied FBR records list Coded House as a business/branch under MUNNAZA USMAN, with a business acquisition record dated 1 July 2024 and taxpayer registration dated 9 July 2024. Coded House LLC is the later Wyoming entity, with formation-service portal date 24 August 2026; the Wyoming Secretary of State certificate states compliance on 25 August 2026 and was issued on 27 August 2026 at 5:45 AM. The Pakistan record is not treated as a separate incorporated company, and the source records do not independently establish a parent/subsidiary or legal-succession relationship.

Field	Value
Prepared for	Coded House LLC / CodeX
Legal jurisdiction	Wyoming, United States
Entity ID	2026-002065283
Authorized management representative	Chas Shaikh
Title	Chief Executive Officer
Signature	
Date	12 September 2026
Authorized management representative	Munnaza Usman
Title	Proprietor · Coded House (Pakistan)
Signature	
Pakistan business presence	Coded House - earlier/original FBR business presence; acquisition record 1 July 2024
Pakistan FBR registration no.	3740577028434
Pakistan registration holder	MUNNAZA USMAN - Individual / Owner
Pakistan income-tax / ATL status	Active; ATL checked 11 September 2026
Pakistan legal-form note	Business/branch under individual taxpayer; separate Pakistani corporate incorporation is not asserted.
